

Posiflex Tablet

Hardware Highlight: Posiflex Tablet

Hospitals everywhere are asking for and seeing the benefits of incorporation of Posiflex tablets in their facilities and cafeterias. Let DFM help implement this customer service and patient satisfaction tool!

Many people are familiar with the Posiflex terminal or all-in-one register that DFM sells to clients for cafeterias and gift shops. DFM has incorporated the use of the Posiflex tablet and can be used for a number of DFM programs. The Posiflex Tablet is a multifunctional tablet that is portable and lightweight. There are numerous ways to incorporate the Posiflex tablet with DFM including cardshield for credit cards, POS Inventory, patient badge scan for delivering trays, room service entry for patients to order, room service dashboard to see the tracking of trays, and floor stock. The tablet comes attached with a magnetic reader and has an optional pistol grip barcode scanner and docking station.

The Posiflex tablet offers the same functionality and selections you would see on your regular register or room service modules. It allows for payments to be processed via payroll, billing, or credit cards. It also allows for floor stock and inventory to be done from anywhere in the hospital and ambassadors will be able to go up to floors and take bedside entry orders. Please contact DFM for pricing!

Modules Supported by the Tablet:

- POS Register
- POS Inventory
- Patient Badge Scan
- Room Service Entry
- Room Service Dashboard
- Floor Stock
